

Commitment to Corporate Governance

Steadfast and trustworthy corporate governance requires truthful leadership and attention to detail. And now, Sarbanes-Oxley mandates compliance to strict controls and business practices. Monitoring all the systems and people in an enterprise is virtually impossible, but the right tools can help you keep an eye on critical areas.

Database Auditing Made Simple

DBAudit, one of many useful Epicor Enterprise Tools, delivers an easy to use, secure way to track changes to sensitive data within your business applications.

Administrators can select the information they want to monitor and DBAudit logs every change to that data, whether the change is made through an application or by direct table updates. DBAudit is a tactical monitoring system that provides a record that serves as an audit trail and deterrent to aberrant practices.

Summary of Features

Who and When
